D.A. Consulting – Spotlight Product
Astaro Security Gateway

The Astaro Security Gateway provides protection from Hackers, Viruses, Malware, spyware, and root kits. Protect your corporate network with one of the leading turnkey security solutions.

Technologies Included:

Fully integrated security solution: Astaro combines many aspects of network protection into one small fully integrated and centrally managed embedded security device.

Network Firewall: The Astaro Security Gateway acts as a network firewall to protect all your internal computers, servers, and devices from any external un-authorized access. This removes most security threats and provides total control of what goes in and out of your office electronically.

Intrusion Protection: No matter how advanced your firewall is you will always have open doors if you host your own e-mail, web, or internal business applications to the internet. By using security definitions of over 7,500 known attacks, the Astaro Security Gateway can block and prevent attacks that a standard firewall cannot. Feel confident that you can stop attacks that normal firewalls cannot.

Web Security: The Web Security component of the Astaro Security Gateway provides full two-engine anti-virus scanning and anti-phishing technologies to ensure that any web browsing anyone in your company does is fully protected. Let's say your user accidently goes to a website thinking they are downloading a legitimate document that is in reality a virus, the web security component picks up the virus and stops it before the computer even starts to download it. The user is notified and the potential security concern is eliminated.

E-Mail Security: The E-Mail Security component of the Astaro Security Gateway provides both protection for environments where you may be hosting your own e-mail, or be using an external e-mail provider. Astaro E-Mail Security scans all e-mails going in and out looking for e-mails infected with Viruses with two separate anti-virus engines.

E-mail Spam Filter: Another added feature of the E-Mail Security is the anti-spam filter. By using multiple databases of spam senders, along with comparing e-mails against spam algorithms the anti-spam module can greatly reduce spam and unwanted e-mails.

Web Cache: Do any group of users always view the same website? Decrease loading time and reduce bandwidth costs by taking advantage of Web Cache. Images and text of regularly viewed websites are stored and cached so they don't need to be re-downloaded every time a user goes to a website.

Internet Usage (Content Filtering) Control: Control websites and web content that is inappropriate for the work place. Stop users from using programs to chat, instant message, or download illegal music and programs. With over 96 content groups, select what your users have access to inside the work place. Increase productivity and reduce unnecessary bandwidth costs.

Site to Site VPN: Do you have multiple offices? Are you having problems connecting branch offices together along with your headquarters? The Astaro Security Gateway solution provides a "Site to Site VPN" which essentially connects all the networks your business may have. Print to printers in remote offices, access network shares on servers in a different part of the country. Astaro provides an easy to setup solution to accomplish site-to-site VPNs.

VPN Remote Network Access: Do you have remote users who want access to network shares, printers, and internal business applications on the road? Does your sales force want to have access to Microsoft Outlook, Microsoft CRM, and/or important documents wherever they are? Implementing a VPN is simple with the Astaro Security Gateway solution. Easily configure the VPN, and permit access to users, and now wherever they may be (with internet access) it will be as if they are connected to a network jack in the office.

The Astaro Security Gateway is a simple, feature rich, cost effective solution that takes a pro-active step towards reducing downtime for users, reducing the time and cost needed to manually remove viruses, and reduce the risk of/and resolve security breaches.

Implement the Astaro Security Solution today, and feel confident that your businesses network security is safe.
