

D.A. Consulting – Spotlight Product

Windows Small Business Server 2011

Microsoft Windows Small Business Server provides Businesses (with up to 75 workstations) a feature rich network environment.

Technologies Included:

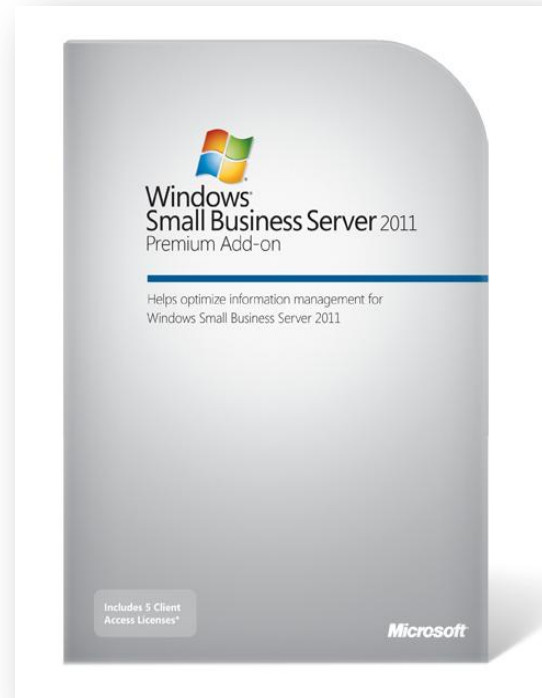

File Sharing: Store and secure your documents on your server to reduce duplicates and reduce the risk of data-loss.

Remote Access: Allow your employees, sales force, and management to connect to their work PCs from home.

Remote E-mail: Let your staff have access to the entire contents of their Microsoft Outlook (Inbox, Folders, Sent, Contacts, Calendar, etc...) remotely from any web browser anywhere in the world.

Backup: Synchronization with the server provides real-time backups/copies of users Desktops, My Documents, and complete user profiles. This reduces the risk of accidental deletions, computer failure, or even disasters such as fires.

Stability and Security: Internal monitoring and security systems provide detailed reports delivered via e-mail to D.A. Consulting to ensure your new IT Infrastructure continues to provide you with this feature rich infrastructure with minimal to no downtime.

With over 10+ years of experience with Microsoft BackOffice/Microsoft Small Business server, our solution specialists can fully design, implement, and support this solution.

Maximize your IT investment for your small business and implement Microsoft Windows Small Business Server 2011 today.
